

E-Commerce Funnel Analysis

Nov 2020 – Jan 2021 · 61K Product Views · 5.69K Orders

Business Health Overview

Business Question: What do the core KPIs say about the funnel overall?

KPI	Value	Status
Overall CVR	7.21%	Above 2–4% benchmark
Total Orders	5.69K	Across 3 months
Average Order Value	\$43.99	Blended all sources
Cart Abandonment Rate	64.77%	High — revenue at risk
Total Product Views	61.25K	Top of funnel

Insight: CVR is healthy above industry benchmark, but 64.77% cart abandonment means nearly 2 in 3 users who add to cart never buy — a major untapped revenue opportunity.

Where Users Drop Off Most

Business Question: Where is the biggest leak in the funnel?

Stage	Stage CVR	Signal
View → Cart	20%	Biggest leak
Cart → Checkout	77%	Healthy
Checkout → Shipping	100%	No drop
Shipping → Payment	59%	Second biggest leak
Payment → Purchase	77%	Healthy
Overall Conversion	7%	Room to improve

Insight: 8 in 10 product viewers never add to cart. The second critical drop at Shipping → Payment suggests friction at the payment entry step — likely a UX or trust issue.

Action: Prioritize product page CTA optimization and payment step simplification.

Full Funnel in Numbers

Business Question: What does the full user journey look like in absolute volume?

- Product Views: 61K
- Add to Cart: 13K (-79% from views)
- Begin Checkout: 10K
- Add Shipping Info: 10K
- Add Payment Info: 6K
- Purchases: 5.69K total orders

Insight: The funnel loses 79.5% of users between product view and purchase. Only 1 in 14 visitors who see a product ends up buying.

Monthly Performance Trends

Business Question: How did funnel performance change month over month?

Month	CVR	Purchase Volume	Verdict
2020-11	7.1%	1.5K	Baseline
2020-12	8.62%	2K	Best month
2021-01	5.45%	1.1K	Worst month

Insight: December 2020 peaked on both CVR and volume — likely holiday-driven demand. January 2021 saw a sharp drop across all stepwise conversion rates simultaneously, not just at one stage.

Action: Investigate January drop — is it seasonal, a product issue, or a channel mix shift?

Purchase Decision Time

Business Question

How long does a typical buyer take to decide?

Content

Median time to purchase: 39 minutes — most buyers decide quickly

Average time to purchase: 99 hours (~4 days) — a slower segment pulls the average up

Insight

The large gap between median (39 min) and average (99 hours) reveals two distinct buyer types — impulse buyers who convert fast, and deliberate buyers who need days. These two groups likely need different marketing approaches.

Action

Use retargeting and email sequences to convert the deliberate buyer segment within 4 days.

Device Performance

Business Question: Which device converts best? How does it perform across all funnel stages?

Device	CVR	Share of Views
Mobile	7.46%	40.5% — largest segment
Desktop	7.0%	—
Tablet	6.7%	—

Insight: Mobile leads in both CVR and volume. However, Shipping → Payment drops to 59–61% on all devices — this friction is device-independent and structural, not a mobile UX issue specifically.

Action: Fix the payment entry step across all devices, not just mobile.

Traffic Source Performance

Business Question: Which traffic source drives the best CVR, revenue, and AOV?

Source	CVR	Revenue	AOV
Referral	8.1%	\$58.1K	\$58.52 — Highest AOV
Direct	6.4%	\$56.1K	\$57.9
Organic	5.5%	\$71.3K — Highest Revenue	\$57.1
Other	4.9%	\$31.3K	\$50.5

Insight: Referral is the highest-quality channel — strong CVR and the highest AOV at \$58.52. Organic drives the most total revenue but at the lowest CVR (5.5%), meaning it attracts high volume but lower-intent visitors.

Action: Invest in referral program growth. Build intent-capture flows for organic visitors.

Geographic Revenue Performance

Business Question: Which countries generate the most revenue and the best conversion quality?

Country	Revenue	AOV	CVR
United States	\$112.9K	\$58.14	7.2%
Canada	\$24.5K	\$67.44	7.6%
India	\$22.1K	\$54.53	7.0%
Australia	\$3.6K	\$82.64	8.0%
Malaysia	\$2.7K	\$95.03 — Highest AOV	8.1%

Insight: The US dominates in volume and total revenue. Australia and Malaysia are small markets but show the highest AOV and strong CVR — indicating premium, high-intent buyers worth developing further.

Strategic Recommendations

Business Question: What should the business prioritize to improve funnel performance?

1. Fix View → Cart — Only 20% of viewers add to cart; improve product page CTAs, images, and pricing clarity
2. Simplify Shipping → Payment — 59% stage CVR across all devices; add trust badges and reduce form friction
3. Reduce cart abandonment — 64.77% abandonment rate; deploy cart recovery emails within 1–4 hours
4. Scale referral channel — Highest AOV (\$58.52) and strong CVR; a referral program could compound quality traffic
5. Develop high-AOV markets — Australia (\$82.64) and Malaysia (\$95.03) show premium buyer behavior; worth targeted investment
